

Pregnancy Ultrasound

Ultrasounds are performed in our office by ultrasound technicians. We will perform an ultrasound at your first visit to confirm your pregnancy, detect the baby's heartbeat and assign your due date. We will then perform another ultrasound around 18-20 weeks to examine the baby's development, growth and anatomy. Additional ultrasounds may be performed throughout the pregnancy based on the medical need.

WHS also offers 3D/4D ultrasounds for "entertainment purposes only" with the option for early gender scan at 16 weeks for a fee. Please ask the front desk about our exciting 3D/4D packages. They make great gifts for grandparents!
